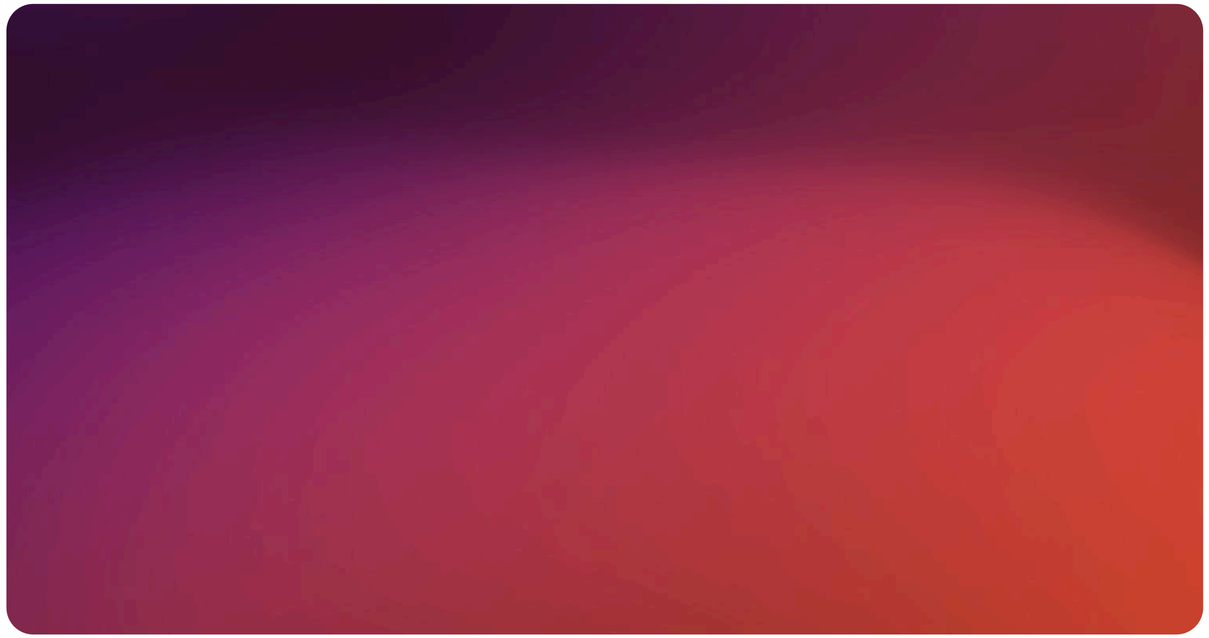
Gradients.1

Gradients are used to add depth, highlight key UI elements, and give motion designers a flexible, branded visual tool.

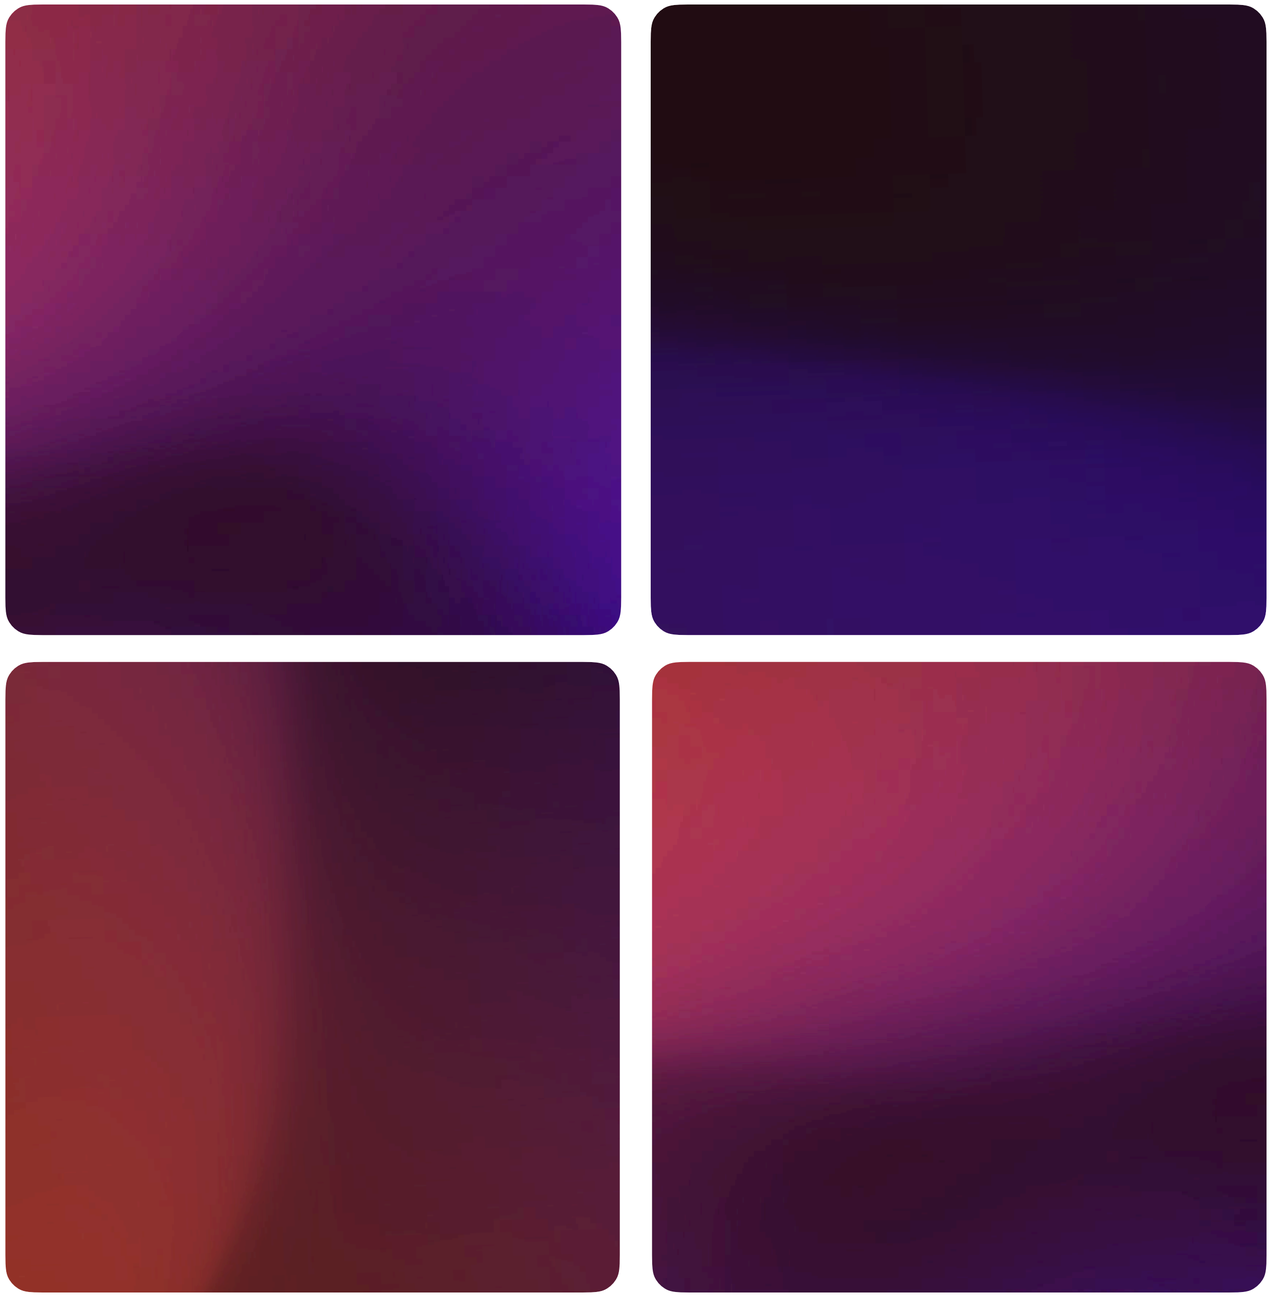
They reflect the blend of security and innovation at the core of Wildcat’s identity.



Gradients.2

Use gradients for:

- Backgrounds in sections or hero blocks
- Animated transitions
- Visual storytelling in motion graphics



Typography

Brand typography system – sizes and weights for titles, body, and UI text

Wildcat Protocol

H1 – Liberation Sans • 60px/80px

Borrowers can't set their own terms. Lenders are forced into rigid, protocol-dictated conditions.

Body 1 – Inter • 32px/44px

Audits, Monitoring, and Bug Bounty Program

H2 – Liberation Sans • 32px/44px

The Wildcat smart contracts have been audited in public by industry-leading security organisations, are actively shielded by advanced on-chain monitoring systems, and we maintain a bug bounty program in case security researchers uncover any issues.

Body 2 – Inter • 22px/36px

Counterparty Certainty

H3 – Liberation Sans • 24px/32px

In a Wildcat market you know exactly who you're lending to: funds are not confederated across several borrowers.

Body 3 –Inter • 18px/32px
